What Are Opiates?

An opiate is a prescription strength pain killer. Doctors write nearly 150 million prescriptions annually for things like morphine, codeine, and oxycontin. However, that's not the only way to access opiates. Opiates are also a common street drug. Heroin and Fentanyl are the most common and some of the deadliest opiates on the street.

Opiates can be ingested, snorted, smoked, and injected. Opiates suppress the body functions often causing individuals to pass out or go "on the nod" between awake and semi-consciousness. This pain reliever is also associated with mood swings, increased weight gain, and nausea and constipation.

Signs of opiate overdose include pale clammy face, limp body, blue or purplish tint to fingernails, vomiting, unable to be awakened or speak, slowed breathing, and delayed heartbeat. If you suspect someone is overdosing, call 911 immediately.

Why Are Opiates Addictive?

Opiates are addictive because of how they impact the body. When an opiate enters the body, it works to block the opioid pain receptors on nerves and essentially dull the pain. When this happens, the body releases an excess amount of dopamine connected to the reward center in the brain. This process indicates to the brain and body that the current "high" is the preferred state. When an opiate narcotic wears off, the body expresses its displeasure through withdrawal symptoms similar to a hangover and generally increased pain sensitivity in the impacted area.

Addiction comes when the body starts to crave the opiates necessary to feel its preferred state. Over time, the same amount of narcotic does not work the same, which is called tolerance, a staple of addiction. This means that you need to take more of the opiate to feel the same preferred "high" state than before.

What Is Important About Attending an "Opiate Rehab Near Me"?

When it comes to looking for rehabilitation, searching for an "opiate rehab near me" probably sounds like the best idea. And guess what? It is.

Attending opiate rehab near me is arguably one of the best options for opiate rehab. This provides an opportunity for clients to live in and tackle the challenges of sobriety in their own community, not a remote location far away where the problems can only be discussed.

Opiate rehab near your typical environment provides not only convenient access to care, but allows for the development and inclusion into the local sober community. This can be one of the biggest supports an individual who has graduated an outpatient program can access.

Choosing to attend opiate rehab near where you live provides daily occasions for growth and development and real-life opportunities for implementation of new positive self-management and coping skills.
